

Connect Any System and Find Your Data

Bridge the gap between you and your data! Searching for your data when it is in disparate systems can be very task oriented, timely and very frustrating. IPeople Scout offers a wide range of tools that make it easier to find and organize your data. With IPeople Scout, explore your data to identify table relationships, intelligent joins across tables and systems, and visualize database crosswalks. Additionally, IPeople Scout offers powerful comparison, query, reporting, scheduling and export features.

Explore Your Data

Explore tables, fields, data, relationships, and more. With multiple search options available, quickly find desired tables and fields, view the structures behind both, discover relationships to other applications and systems, and view the data within.

One Solution for Multiple Systems

Access all versions of MEDITECH, other HCIS systems (including Epic), data repositories, and any other ODBC or OLE DB compliant database... all within IPeople Scout. Save time with a single point of access for exploring all connected systems.

Compare Systems

Compare systems to easily understand where data resides in one versus another. Find data in your HCIS system and quickly discover where the same data resides within your data repository... and vice versa.

View Your Data

Utilize the powerful preview feature in order to quickly view all data stored within tables and fields and rest assured knowing that your data is secure. You can set security and permissions down to the column level.

Centralized Report Writing

Take advantage of the built-in report writing features to quickly generate grids and reports across multiple applications and systems... one report writing solution for all systems! Easily export data to Microsoft Excel, PDF, HTML, and more. Schedule reports to run on an automated basis and automatically distribute as needed.

HOW YOU WILL SUCCEED

- ✓ Reduce frustrations by quickly finding the tables and fields that you need for reporting purposes
- ✓ Have confidence that you have the right table or field through the powerful preview feature
- ✓ Generate reports effortlessly across multiple systems, saving tremendous amounts of time

"IPeople Scout has dramatically reduced the time and effort spent to create reports and mine data. The added functionality of smart joins across multiple Meditech tables has been a life saver. I no longer have to dig through documentation, or use trial and error to ensure I have the correct linked fields for multiple tables. I am also now able to export via excel, pdf, txt, or csv without having to go through the hassle of bringing multiple file types across multiple programs. The ease of use has also translated into being able to train additional users to write simple reports without having to burden the IS department. IPeople Scout has helped our facilities leverage Meditech data in a quicker more user friendly manner."

-Drew Johnson, Formerly with Clearwater Valley Hospital

Search. Find. Explore.

A Must Have Solution for ALL Report Writers

THE CHALLENGE

THE SOLUTION

Have you ever struggled with finding that one data element that must be on the report... but you just cannot find which field to include on your report?	IPeople Scout offers multiple search options for quickly finding the right fields to include on your reports. With the ability to preview the data behind the field, you can rest assured that you are always including the correct information.
Are you familiar with where data resides in the HCIS system but cannot find the same data in your DR or within other systems?	Utilize the IPeople Scout compare feature to easily find fields within your HCIS system and see where the same field resides within the data repository.
Are you questioning whether you are using the best index to ensure that your report is optimized while also including all of the required activity?	The available search options provide filters to quickly see all indexes within the system and to discover the fields behind the index. IPeople and system documentation is also available, providing additional insight into how each index can be best utilized.
Do you need to capture data across applications but would like to avoid the complexity of fragment reports?	Say good-bye to fragment reports! With the built-in query builder, link tables across multiple applications and utilize the smart join technology to ensure the most efficient joins are in place.
Do you need to combine data from multiple sources and present in one view?	In the past, presenting data from multiple systems involved exporting multiple reports and manually combining into one view... resulting in unnecessary manual work and possible user error. Using IPeople Scout, you can create a query that includes tables from multiple systems and presents the results in one view.
Do you think that you are including the right fields in the report but would love to easily confirm that the data in the fields truly contain what you are expecting?	Take advantage of the powerful preview feature in IPeople Scout to see the data behind the tables. You can easily adjust the SQL statement to query for specific information and ensure that you have the right data.
Would you like to quickly and easily export your HCIS data to Microsoft Excel without having to create NPR reports?	Utilize the data preview and reporting features to export any data to Microsoft Excel, PDF files, HTML, and more.
Does your organization have multiple systems and as a result, multiple report writing solutions requiring multiple levels of knowledge?	Learning report writing solutions can be an extensive investment in time and resources. Utilize the IPeople Scout user-friendly reporting features to quickly create reports for any connected system. You can now utilize one report writing solution in support of your many disparate systems.
